

Model: K2063i

10 Channels (4V + 6I) output. Each output channels are independent control of magnitude, phase angle & frequency values, can generate a variety of output waveforms such as: DC; sinewave; sinewave with percent harmonics at various phase angles etc.

Independent variable battery simulator (DC 15~350V, 140watts)

Anti-clipping detect; cabinet grounding, wrong wiring connect alarm and self-protect, overload and over heat protection.

Test high burden electromechanical relays, 6x10A continuous outputs.

Provide convenient and prompt precision calibration for amplitude and phase by software without open the cabinet.

Able to operate by host or laptop control with same software interface and functions

Small, lightweight(21kg) all in one box solution, 9.7" touch screen, fully functions KRT software allow advance state sequence, ramping, overcurrent, distance, differential, power swing, synchronizer modules, etc.

Graphical test modules and templates for testing of various relays

Quick relay testing facility in Manual mode

Point & Click testing

RIO/XRIO import and export facility

Switch on to fault (SOTF)

Power system model for dynamic testing

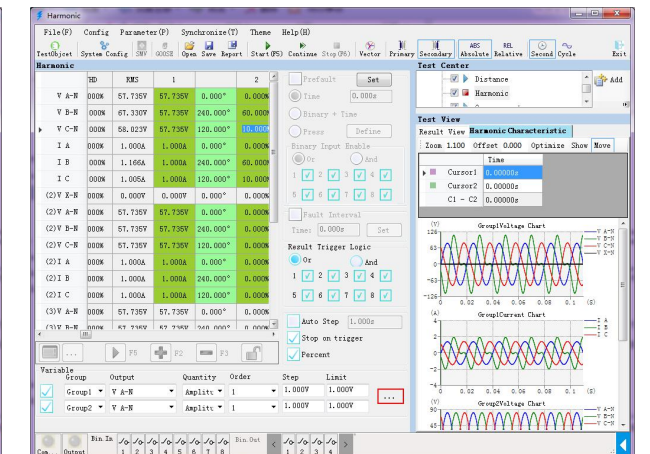

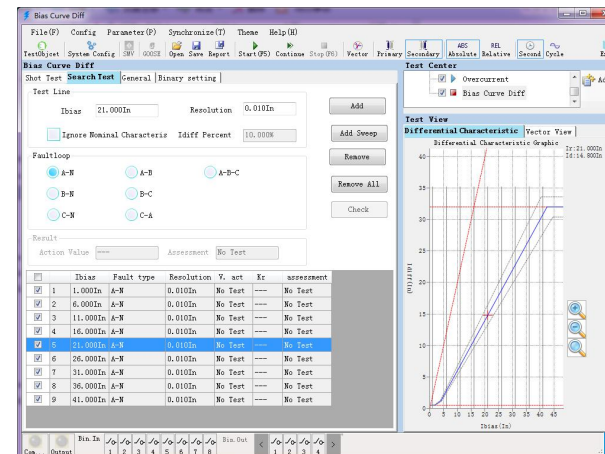

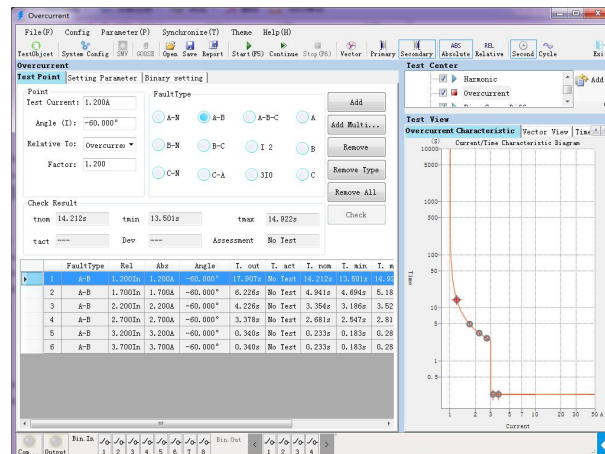

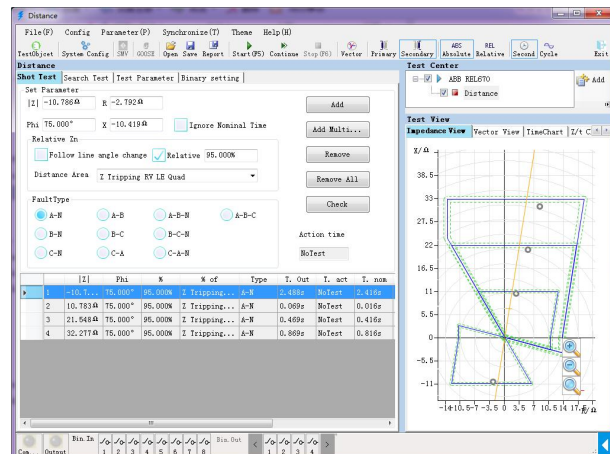

GPS sync end-to-end testing

Online vector display

Automatic compare actual characteristic with expected characteristic

Comtrade file generate and playback

Automatic test report creation

4 voltage outputs:
 4 x 310V / each 124VA
 2 x 620V / each 248VA

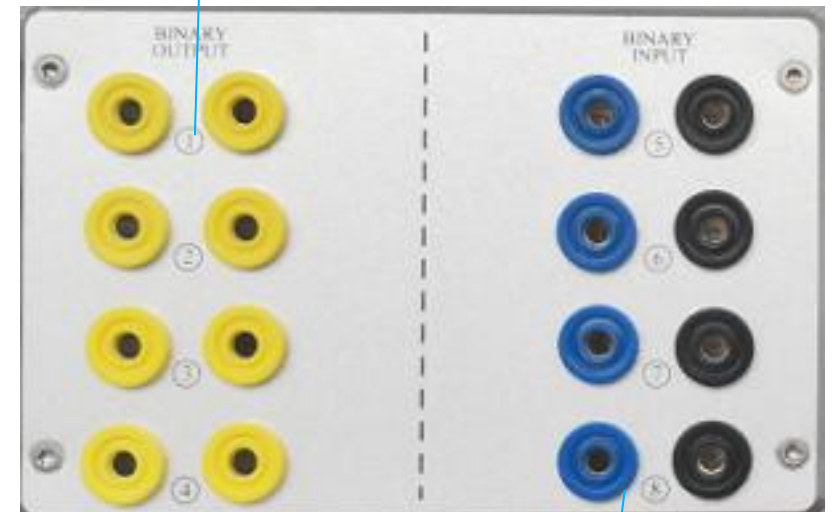

6 current outputs:
 6 x 35A / each 480VA
 3 x 70A / each 850VA
 1 x 100A / 1000VA

Independent Battery Simulator:
 DC 15 ~ 350V / 140W

4 binary inputs (dry/wet)
 No's: 1~4

4 binary outputs (relay type)

4 binary inputs (dry/wet)
 No's: 5~8
